Suwannee Cement Introduces New Product

ASTM Cement

Since January 2006, SAC began producing a new type of cement: ASTM Cement with Limestone Addition. This is our 4th different type of cement produced (along with AASHTO, Hardie and Pre-cast Cements) and is regulated by ASTM C150 - 05 standards, which has chemical and physical requirements that must be met to assure a good quality product.

ASTM allows that it is added up to 5% limestone to the cement, which will in fact increase the cement strengths and make it a better product. Our initial runs have out performed our AASHTO DOT product, which is the best product in the Florida market!

Therefore, SAC used the usual analysis performed on its regular cement, adding even more analysis to make sure we comply 100% with the stated requirements. This special cement has (as all the others) a Mill Certificate that attests to the quality standards SAC and ASTM have established.
